**SECOND OFFICE ACTION ---- A FINAL REJECTION**

1. The CD computer program listing filed 1/21/2003 is acceptable.
2. The following is a quotation of the first paragraph of 35 U.S.C. 112:  
The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
3. Claims 32, 41-44 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In the specification pages 7-8, applicant does describe the measurement of the total travel distance of the movable barrier and the motor speed is controlled based on the travel distance without mentioning anything about the detector.

In the claims, applicant is claiming "a detector for determining a physical characteristic of the movable barrier" or the like.

However, in the embodiment, there is no description of the detector for determining the physical characteristic of the movable barrier.

In the specification, applicant repeatedly describes:

- force/speed adjustment using potentiometers (see Fig. 4, the potentiometers 202, 204 or Fig. 5B, the potentiometers R33 and R34, for example);
- determining position using a position detector (no reference numeral shown in such a position detector);
- obstruction detection using an obstacle detector (again, no reference numeral shown in such a detector);
- speed sensing using a RPM sensor (no reference numeral shown in such a sensor).

As shown above, there are at least three different types of detectors described in the embodiment, but none has a reference numeral. Further, none has been used to determine the physical characteristic of the movable barrier.

The examiner hereby asks applicant to point out (1) which detector is used for determining the physical characteristic of the movable barrier and (2) where is the embodiment shown in the specification.

If applicant can specifically answer the above-mentioned two questions, this application will be allowed because no prior art teaches a detector for determining the physical characteristic of a movable barrier and the motor speed is adjusted based on the determined physical characteristic of the barrier.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See M.P.E.P. § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CAR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CAR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
